

Cyber Management Systems Cyber Security Specialists Needed

JOB DESCRIPTION

Cyber Management Systems is looking for a Sr./Security Compliance Specialist to support security engineering projects.

Summary

The Security Compliance Specialist shall be responsible for completing and maintaining documentation such as the system security plan, security risk assessment, security control assessment activities, and continuous monitoring in small business environments. Security documentation will be required to achieve and maintain system Authorization-to-Operate (ATO).

Job Duties

- The security compliance specialist will work with the Clients Office of Information Security team and stakeholders to identify, document, and evaluate the status system security controls. Addition responsibilities will include using our security configuration management tools and reports to identify risks and track findings against Federal security policies and guidelines for mitigation planning and remediation.
- Security responsibilities include developing and maintaining system SSP, ISCP, IR Plan, CM Plans, Audit Plans, and ATO package documentation requirements. The security compliance specialist will support the security assessment process from planning and coordinating meetings with Client and assessors to remediation and corrective action planning.
- Additional responsibilities may include performing annual control reviews as part of continuous monitoring to identify new risks, track findings against Federal security policies and guidelines, managing Plan-of-Action and Milestone (POAM) to closure and mitigation planning and remediation of controls in the Cloud environment. Candidates are encouraged to have a technical background to support the role
